

Forms Designer Module

The Forms Designer module allows you to customize virtually any printed form. Add a logo to your customer billing statements, use an auto-signature for check authorization, or generate your own check stock.

Forms Designer

- I Save money by producing your own forms—Whether it's a check, a purchase order, or another form, you can save by producing your own forms as needed. Eliminates the need to lock-up blank form stock.
- I Decide what information to include on your outgoing forms—Modify the standard forms or create your own. Select from related database fields or create your own custom text. Add your organization's logo, mission statement, and more to any form and create an unlimited number of custom forms.
- I Tired of signing checks?—Use the auto-signature feature of Forms Designer. Includes security features to limit access to the custom forms and signatures. Set check amount maximums for use of the auto-signature feature on checks.
- I Easy to set up and use—With the "drag and drop" visual design tool, creating your own forms is easy. Specialized controls handle alignment with a simple mouse click. Quickly and easily change fonts, colors, and field locations.

Fully Integrates with Other Sage MIP Fund Accounting Modules!

- I Design custom checks and vouchers for the General Ledger, Accounts Payable and Payroll modules.
- I Create a unique purchase order form design for the Purchase Order module.
- I Create custom invoices and customer statements for the Accounts Receivable Billing module.
